

Interlocking Solid Top Gym Mat Rubber Flooring for Gyms

Interlocking Solid Top Gym Mat Specification

For the gym owner or even the home enthusiast, interlocking solid top gym mats are a universal flooring solution offering a quality product and excellent value for money.

Each mat is 910mm x 910mm in size and 16mm thick giving the mats great impact absorbing properties. The flat top on the mats provides a stable, grippy surface to lift on as well as making the mats much easier to sweep clean. They are commonly used for free weight areas to both protect the floor from impacts and deaden the noise caused by weights being dropped.

Each mat interlocks with the adjoining mat using a built in system meaning there are no extra materials required to complete a tidy and safe installation. Ramped edging strips are available eliminating any trip hazards in area where the mats don't sit flush to a wall. These mats require no adhesive for installation and will not slide around due to the bobbled bottom.

Characteristic	Specification
Size (mm)	910 x 910
Thickness (mm)	16 (10mm solid + 6mm underside bobble)
Weight	8.3kg
Connection System	Built-in interlocking
Material	Rubber
Pallet Size (units)	120
Types of Edging	Male and Female (Purchased Separately)

Interlocking Solid Top Gym Mat Ramped Edging

There are two types of ramped edging connections for these mats, which we refer to as male and female. The male edging has a protruding edge and connects to the straight edge side of our anti-fatigue and solid top gym matting. The female edging sits on top of the protruding edges of the matting.
