

Gym/Garage Tile Flooring

Garage floor tiles are extremely popular across the UK as a simple yet effective way of creating a friendlier environment in your garage space. Whether its your own personal work shop or simply car storage the list of advantages is extensive.

- **Reduces dust from concrete**
- **Provides shock absorbtion**
- **Assists with thermal insulation**
- **Reduces noise from machinery**
- **Creates a slip resistant surface**
- **Allows easier cleaning of spillages**

Unlike many competitors, our tiles are a massive 15mm thick meaning they are extremely hard wearing. Manufactured in India from quality rubber rather than the more commonly found rubber compounds from China, these mats will not bend, curl or lift over time. Installation requires no specialist equipment or adhesive. Once installed the mats can simply be lifted and moved on to another area if necessary.

Gym/Garage Tile Specification

Gym Flooring

Gym Tiles are a brilliant flooring solution for both the home enthusiast and gym owner. These small tiles are only 500mm x 500mm in size making them ideal for compact areas which aren't a uniform shape. The flat, grippy surface allows for great stability as well as making them easy to sweep clean. For edges which don't fit flush to a wall we can also supply ramped edging strips eliminating any trip hazards. Interlocking Gym Tiles offer fantastic value for money giving you a professional gym surface at a fraction of the usual cost.
